Experience

Software Development Engineer Intern, NonStop io Technologies (Hybrid)

Feb 2025 – Present

Machine Learning, Data Engineering, Software Development

- Built microservices using **Spring Boot and FastAPI** for data-driven and ML-integrated applications.
- Designed and executed large-scale data workflows handling **100–300 GB datasets**, focusing on structured processing and pipeline reliability.
- Automated multi-step execution pipelines, including failure recovery and re-run logic, reducing manual intervention in repetitive workflows.
- Developed systems for **workflow orchestration, run tracking, and event-based monitoring** using APIs and PostgreSQL (JSONB).
- Deployed and executed workflows across **local environments and AWS (Batch, EKS, HealthOmics)**.
- Built an **LLM-assisted analysis system** to generate actionable summaries from structured reports, reducing manual analysis effort and improving decision turnaround time.
- Worked with **Python, SQL, Docker, REST APIs, JMeter, RabbitMQ, and Git** in an agile development environment.

Projects

Power Consumption Forecasting – Time-series forecasting on real-world electrical data

Tech Stack: Python, SARIMAX, LSTM

- Built a forecasting model using **1 year of time-series data** (power consumption, voltage) collected from institutional data systems.
- Implemented **SARIMAX-based models** achieving **RMSE of 1.35**.
- Explored deep learning approaches using **LSTM** for temporal pattern modeling and comparison.
- Performed feature engineering, trend decomposition, and temporal analysis for predictive modeling.

MetaboliQ AI – Machine learning platform for diabetes prediction

Tech Stack: Python, Scikit-learn, Flask

- Built predictive models achieving **83% accuracy** for diabetes risk classification.
- Designed end-to-end ML workflow including data preprocessing, feature engineering, model training, and evaluation.
- Led project execution as team lead; selected as **Top 10 Finalist at Intel AI Hackathon (IEEE INDICON, IIT Kharagpur)**.

ADAPT – Alzheimer's Disease Analysis and Prediction Tool

Tech Stack: Python, VGG-19, FastAPI, React

- Developed deep learning pipeline for MRI-based classification using **VGG-19**.
- Integrated backend inference system with frontend interface for usability.
- Deployed FastAPI backend on Google App Engine and React frontend on Netlify.

Technical Skills

Programming Languages: Python | Java | JavaScript | SQL

Machine Learning: Scikit-learn | TensorFlow | PyTorch | NLTK | Huggingface Transformers

Time-Series and Statistical Modeling: SARIMAX | RNN | LSTM | Forecasting | Time-Series Analysis

Data Engineering: ETL/ELT | Data Pipelines | PostgreSQL | Databricks | Snowflake

Backend Systems: FastAPI | Spring Boot | REST APIs | System Design | Data Structures

Tools and Platforms: Claude Code | Docker | Kubernetes | AWS | Git | JMeter | RabbitMQ | Apache Kafka | Spark

Education and Languages

Bachelor of Technology, AISSMS Institute of Information Technology, Pune

2022 – 2026

- Major: Artificial Intelligence and Data Science (**GPA: 8.23/10**).
- Relevant Coursework: AI, Machine Learning, Deep Learning, NLP, MLOps, DBMS, Operating Systems, OOP, Data Structures, Cloud Computing.

Achievements – HSC Rank 1 | Top 10 Grand Finalist at Intel AI Hackathon by IEEE INDICON, IIT Kharagpur | First Runner-Up at ISB&M Pune Analytics Case Study Competition

Languages – English, Hindi, and French
